

Hi Marcus,

As a professional detailer of fifteen years specializing in Concourse, show and exotic cars and boats, I am wary of new products and the claims that surround them.

Through time and testing with Permanon products I have found that some of the old techniques applied in vehicle and boat detailing can be replaced with the use of Permanon.

Permanon has offered a time efficient and extremely effective way to achieve a high gloss and deep reflective look to not only paint but all hard surfaces.

I am responsible for the showroom and delivery preparation for automotive stables such as Ferrari, Maserati and Lamborghini and have found the normally necessary hand waxing was no longer needed. It has now been replaced with the use of Permanon Supershine in the 'wet deck' stage of the detail leaving the cars glossy, deep and protected.

Customers are continually asking how to best take care of their vehicles and without reservation we introduce them to the Permanon range. The result is the ability to clean and protect with an extremely high gloss which at the same time reduces any further need for waxes. Subsequently we see the return of extremely happy customers wanting to purchase Permanon to make their car maintenance and protection efficient and effective.

When it comes to protecting Motor yachts and cruisers, I have found Permanon to be more efficient and effective than any other maintenance product I have used. Waxing a boat is a very time consuming process and the products tend to degrade quickly. With Permanon, I have found that applying a protective coating to all surfaces takes 50% less time and achieves a stunning result in terms of appearance and protection.

As Permanon can be applied to all areas, glass, metal and Gelcoat, we achieve total protection with great efficiency. Customers have commented on how easy maintenance has become as the sea salt and soiling no longer bakes onto the surfaces and is simply washed away with a quick rinse and wipe down.

We recommend Permanon to every client.

Regards

Mark Gilligan
